

COMMUNICATIONS

FOR IMMEDIATE RELEASE

CUSTOMERS SERVED BY COMMUNICATIONS FACILITIES NEAR PORTLAND'S FOREST PARK TO BENEFIT FROM NEW MANAGEMENT

The "Green Leaf" communications facilities — a suite of three state-of-the-art towers and supporting facilities — are now under the care of Silke Communications. The change will provide national and local communications carriers and wireless internet service providers with easier access and enhanced performance via the facility in Portland's West Hills near Forest Park in the Sylvan/Skyline area.

The towers and facilities are located at 45-31-30.8/45.525222 latitude and 122-44-53.9/-122.748306 longitude at a ground elevation of 356 meters/1,168 feet. Two towers are 80-feet tall and one is 60-feet tall. (View location at <http://silkecom.com/Towers/Listing>.) Like all Silke sites, Green Leaf features security, back-up power and telco. This site also offers fiber optic and microwave facilities.

The biggest winners from the newly inked operations and management agreement are likely to be wireless communication users from the west slope of Forest Park, across downtown, and into the nearby industrial areas. President Jim Silke, Jr. notes that those working in notoriously difficult-to-serve facilities constructed of concrete will also benefit.

This agreement is reflective of Silke's continued expansion in its tower services division. The Oregon-based company now manages a series of west coast towers and facilities, in addition to its own portfolio.

Silke Communications offers a full range of wireless communication services. It is western Oregon and southwest Washington's leading supplier of wireless radio solutions, including equipment sales and maintenance. Silke also provides site construction, maintenance and operation for communications site owners and carriers. It offers access to spectrum and delivery of VHF, UHF, 800 Mhz, conventional and LTR networks. Silke's wide area networked, trunked radio systems: FleetNet™ Digital and FleetNet™ Classic are widely used for a range of commercial and industrial applications.
